Semester 2, 2021

This Lecture is Being Recorded

Knights and Knaves Puzzle

On the island of Knights and Knaves, everyone is a knight or knave. Knights always tell the truth. Knaves always lie.

Assignment Project Exam Help

Today there is a census on the island!

You are a census taker, going from house to house. Fill in what you know about each of these three houses.

https://powcoder.com

- **In house 1:** Husband: We are both knaves.

Validity and Satisfiability

Assignment Project Exam Help

A propositional formula is valid if no truth assignment makes it false. Otherwise it is non-valid.

https://powcoder.com

It is unsatisfiable if no truth assignment makes it true. Otherwise it is satisfiable.

A valid propositional formula is a tautology.

Add WeChat powcoder

An unsatisfiable propositional formula is a contradiction.

Tautology Example

$(\neg P \wedge Q) \Rightarrow (P \Rightarrow R)$ is valid:

Assignment Project Exam Help

P	Q	R	$\neg P \wedge Q$	$P \Rightarrow R$	$(\neg P \wedge Q) \Rightarrow (P \Rightarrow R)$
f	f	f	f	t	t
f	f	t	f	t	t
f	t	f	t	f	t
f	t	t	t	t	t
t	f	f	f	f	t
t	f	t	f	t	t
t	t	f	f	f	t
t	t	t	f	t	t

https://powcoder.com

Add WeChat powcoder

Logically, "Valid" Means Vacuous

In ordinary discourse, we may praise somebody by saying "the point you make is valid."

But in formal logic, a valid statement is not that laudable; in a sense it is void of information. For example, $A \Rightarrow A$ is a vacuous statement, and valid.

"If Trump is sane then Trump is sane" tells us nothing about whether Trump is sane—the statement is true whatever the case may be.

You don't even have to know who Trump is, or what it means to be sane, in order to agree: The statement is inherently true.

Validity Checking in Haskell

Given a truth table for a proposition P, it is easy to check if P is valid. The conjunction of all the entries in P's column must be true.

Assignment Project Exam Help

To check the validity of 3-place Haskell predicate:

https://powcoder.com

```
valid3 :: (Bool -> Bool -> Bool -> Bool) -> Bool
valid3 f
  = and [f p q r | p <- bs, q <- bs, r <- bs]
    where
      bs = [False, True]
```

Validity Checking in Haskell

Given a truth table for a proposition P, it is easy to check if P is valid. The conjunction of all the entries in P's column must be true.

Assignment Project Exam Help

To check the validity of 3-place Haskell predicate:

https://powcoder.com

```
valid3 :: (Bool -> Bool -> Bool -> Bool) -> Bool
valid3 f
  = and [f p q r | p <- bs, q <- bs, r <- bs]
    where
      bs = [False, True]
```

Add WeChat powcoder

Poll 2: What does a function to check satisfiability look like?

Contradiction Example

Assignment Project Exam Help

$P \wedge Q \wedge (\neg Q \Leftrightarrow (\neg P \vee Q))$ is unsatisfiable.

Again, we can just complete the truth table. However, it is often possible to apply faster reasoning.

https://powcoder.com

In this case, P and Q are conjuncts of the formula, so if a truth assignment maps either to $\mathbf{f}$, the formula evaluates to $\mathbf{f}$.

Add WeChat powcoder

And if P and Q are both mapped to $\mathbf{t}$, the third conjunct becomes $(\neg\mathbf{t} \Leftrightarrow (\neg\mathbf{t} \vee \mathbf{t}))$, which again evaluates to $\mathbf{f}$.

Substitution Preserves Validity + Unsatisfiability

Validity is preserved by substitution of propositional letters by formulas.

Assignment Project Exam Help

We saw that $(\neg P \wedge Q) \Rightarrow (P \Rightarrow R)$ is valid, and hence

https://powcoder.com

$$(\neg(A \vee B) \wedge (B \Leftrightarrow C)) \Rightarrow ((A \vee B) \Rightarrow (B \Leftrightarrow C))$$

is valid.

Add WeChat powcoder

(Different letters can be replaced by the same formula, but of course, all occurrences of a letter must be replaced by the same formula.)

A formula is unsatisfiable iff its negation is valid.

It follows that substitution also preserves unsatisfiability.

Poll 3

Does substitution preserve satisfiability?

Assignment Project Exam Help

https://powcoder.com

Add WeChat powcoder

Poll 3

Assignment Project Exam Help

Does substitution preserve satisfiability?

No — a counter-example is easy:

https://powcoder.com

Add WeChat powcoder

Poll 3

Assignment Project Exam Help

Does substitution preserve satisfiability?

No — a counter-example is easy:

https://powcoder.com

Take P (which is clearly satisfiable). Then substitute P by $Q \wedge \neg Q$.

The fact that P can be made true does not mean we cannot also make if false.

Add WeChat powcoder

In fact, the typical propositional formula can be made both true and false; it will simultaneously be satisfiable and non-valid.

Models, Logical Consequence, and Equivalence

Assignment Project Exam Help

Let θ be a truth assignment and F be a propositional formula. If θ makes F true then θ is a model of F.

G is a logical consequence of F iff every model of F is a model of G as well.

https://powcoder.com

In that case we write $\boxed{F \models G}$

If $F \models G$ and $G \models F$ both hold, that is, F and G have exactly the same models, then F and G are (logically) equivalent.

Add WeChat powcoder

In that case we write $\boxed{F \equiv G}$

Poll 4

Of the following statements, which allow us to conclude $P \Rightarrow Q$?

Assignment Project Exam Help

- P
- $\neg P$
- Q
- $P \Rightarrow (Q \wedge R)$

https://powcoder.com

- $(P \vee R) \Rightarrow Q$
- $\neg P \vee Q$

Add WeChat powcoder

- $\neg Q \Rightarrow \neg P$
- $P \Rightarrow (Q \vee R)$
- $(P \Rightarrow Q) \vee R$

Poll 4

Of the following statements, which allow us to conclude $P \Rightarrow Q$?

Assignment Project Exam Help

- P
- $\neg P$
- Q
- $P \Rightarrow (Q \wedge R)$
- $(P \vee R) \Rightarrow Q$
- $\neg P \vee Q$
- $\neg Q \Rightarrow \neg P$
- $P \Rightarrow (Q \vee R)$
- $(P \Rightarrow Q) \vee R$

https://powcoder.com

Add WeChat powcoder

Which of the statements are logical consequences of $P \Rightarrow Q$?

Substitution Preserves Logical Equivalence

Assignment Project Exam Help

If $F \equiv G$ and F' and G' are the results of replacing each occurrence of letter P (in both) with formula H, then $F' \equiv G'$.

https://powcoder.com

Add WeChat powcoder

Interchange of Equivalents

Replacing equals by equals yields equals. If

1. F is a sub-formula of H,
2. $F \equiv G$, and
3. H' is the result of replacing F in H by G,

then $H \equiv H'$.

Interchange of equivalents preserves not only logical equivalence.

It also preserves logical consequence, validity, and unsatisfiability.

Unlike substitution, it even preserves satisfiability.

Add WeChat powcoder

Some Equivalences

Absorption: $P \wedge P \equiv P$

$P \vee P \equiv P$

Commutativity: $P \wedge Q \equiv Q \wedge P$

$P \vee Q \equiv Q \vee P$

Associativity: $P \wedge (Q \wedge R) \equiv (P \wedge Q) \wedge R$

$P \vee (Q \vee R) \equiv (P \vee Q) \vee R$

Distributivity: $P \wedge (Q \vee R) \equiv (P \wedge Q) \vee (P \wedge R)$

$P \vee (Q \wedge R) \equiv (P \vee Q) \wedge (P \vee R)$

Assignment Project Exam Help
https://powcoder.com
Add WeChat powcoder

More Equivalences

$\Leftrightarrow$ and $\oplus$ are also commutative and associative.

Assignment Project Exam Help

Double negation: $P \equiv \neg\neg P$

De Morgan: $\neg(P \wedge Q) \equiv \neg P \vee \neg Q$

$\neg(P \vee Q) \equiv \neg P \wedge \neg Q$

https://powcoder.com

Implication: $P \Rightarrow Q \equiv \neg P \vee Q$

Add WeChat powcoder

Contraposition: $\neg P \Rightarrow \neg Q \equiv Q \Rightarrow P$

$P \Rightarrow \neg Q \equiv Q \Rightarrow \neg P$

$\neg P \Rightarrow Q \equiv \neg Q \Rightarrow P$

Biimplication: $P \Leftrightarrow Q \equiv (P \wedge Q) \vee (\neg P \wedge \neg Q)$

Quiz

Assignment Project Exam Help

https://powcoder.com

Add WeChat powcoder

Find an alternative way of writing bi-implication—as a conjunction.

Last Equivalences

Let $\bot$ be any unsatisfiable formula and let $\top$ be any valid formula.

Assignment Project Exam Help

Duality: $\neg\top \equiv \bot$
$\neg\bot \equiv \top$

Negation from absurdity: $P \Rightarrow \bot \equiv \neg P$

https://powcoder.com

Identity: $P \vee \bot \equiv P$
$P \wedge \top \equiv P$

Add WeChat powcoder

Dominance: $P \wedge \bot \equiv \bot$
$P \vee \top \equiv \top$

Contradiction: $P \wedge \neg P \equiv \bot$

Excluded middle: $P \vee \neg P \equiv \top$

Poll 5

Assignment Project Exam Help

Which of these claims hold?

1. $P \Rightarrow Q \equiv (Q \Leftrightarrow (P \vee Q))$
2. $(P \Rightarrow Q) \wedge (P \Rightarrow R) \equiv P \Rightarrow (Q \wedge R)$
3. $(P \Rightarrow R) \wedge (Q \Rightarrow R) \models (P \wedge Q) \Rightarrow R$

Exit Puzzle for People Who Like Puzzles

Assignment Project Exam Help

Long before Covid-19, Mr. Smith and his wife invited four other couples. When everyone arrived, some of the people shook hands with some of the others. Of course, nobody shook hands with their partner, or themselves, and nobody shook hands with the same person twice.

https://powcoder.com

After that, Mr. Smith asked everyone how many times they shook somebody's hand. He received different answers from all nine!

Add WeChat powcoder

How many times did Mrs. Smith shake hands?
